

Abstract Linear Algebra - Part 25

$$\ell \colon \bigvee \longrightarrow \bigvee$$
 linear: $\ell(x + y) = \ell(x) + \ell(y)$
$$\ell(\lambda \cdot x) = \lambda \cdot \ell(x)$$

$$\begin{array}{c|c} & & & \\ & & \\ & & & \\ & & \\ & & \\ & & & \\ & & \\ & & & \\ & & \\ & & \\ & & & \\ & & \\ & & & \\ & &$$

$$\mathcal{B} = (b_1, b_2, \dots, b_n) \text{ basis of } V$$

$$\implies x \in V \text{ can be written as } X = \alpha_1 b_1 + \dots + \alpha_n b_n$$

Hence:
$$l(x) = l(x_1b_1 + \dots + x_nb_n)$$

$$= \alpha_1 l(b_1) + \alpha_2 l(b_2) + \dots + \alpha_n l(b_n)$$
If know these, we know l

Example:
$$V = P_3(R)$$
, $W = P_2(R)$, $A : V \rightarrow W$

$$P \mapsto P$$
is a linear map:

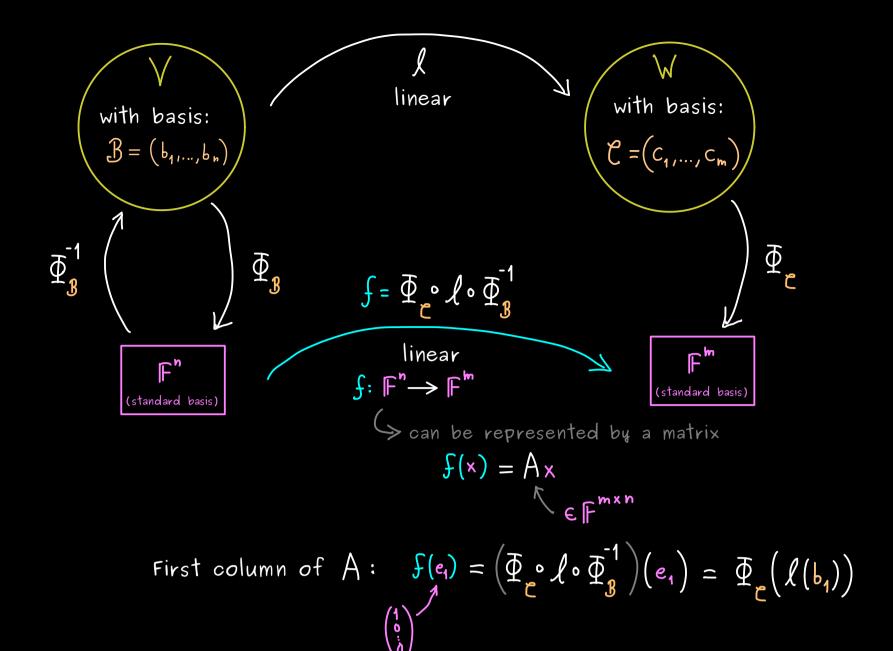

basis:
$$\mathcal{B} = (b_1, b_2, b_3, b_4) = (m_0, m_1, m_2, m_3)$$

with $m_0: x \mapsto 1$, $m_k: x \mapsto x^k$

$$\mathcal{L}(m_0) = 0 \quad \text{zero vector: } x \mapsto 0$$

$$\mathcal{L}(m_k) = k \cdot m_{k-1}, \quad k \in \{1, 2, 3\}$$

Result:

Matrix representation: For a linear map $\ell: \bigvee \longrightarrow \bigvee$

is called the matrix representation of ℓ with respect to 3 and c.

Example (from before)
$$V = P_3(R)$$
 basis: $B = (b_1, b_2, b_3, b_4) = (m_0, m_1, m_2, m_3)$

with $m_a: \times \mapsto 1$, $m_k: \times \mapsto \times^k$

$$f: \bigvee \longrightarrow \bigvee$$

$$W = \mathcal{P}_{2}(\mathbb{R}) \text{ basis: } \mathcal{C} = (c_{1}, c_{2}, c_{3}) = (m_{0}, m_{1}, m_{1})$$

is a linear map!

$$\Phi_{\mathbf{c}}(\ell(\mathbf{b}_{1})) = \Phi_{\mathbf{c}}(\ell(\mathbf{m}_{0})) = \Phi_{\mathbf{c}}(0) = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix} \in \mathbb{F}^{3}$$

$$\Phi_{\mathbf{c}}(\ell(\mathbf{b}_{2})) = \Phi_{\mathbf{c}}(\ell(\mathbf{m}_{1})) = \Phi_{\mathbf{c}}(\mathbf{m}_{0}) = \begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix} \in \mathbb{F}^{3}$$
