The Bright Side of Mathematics

 $\mathcal{F}_{n}(f)$

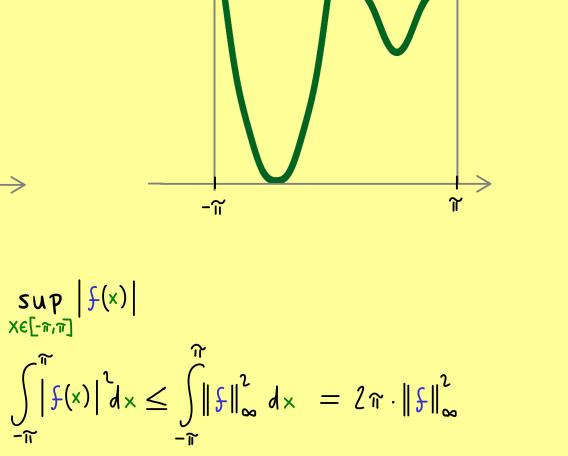

Fourier Transform - Part 14

 $\|f - \mathcal{F}_{n}(f)\|_{L^{2}} \xrightarrow{n \to \infty} 0$ not 2 not a pointwise convergence!

continuous and piecewise C^1 -function

Theorem:

$$\Rightarrow \|f\|_{L^2} \leq \|f\|_{\infty}$$

$$f: \mathbb{R} \to \mathbb{C} \quad 2\pi\text{-periodic continuous function.}$$

Assume there are finitely many points $(a_1, a_2, ..., a_m)$

inside the interval $\left[-\pi,\pi\right]$ such that: $f|_{[a_j, a_{j+1}]} \in C^1$ for all $j \in \{0, 1, ..., m\}$
