Fundamental Theorem of Calculus

<u>Proof</u>:

$$\int_{a}^{b} f'(x) dx = \sum_{j=0}^{m} \int_{a_{j}}^{a_{j+1}} f'(x) dx = \sum_{j=0}^{m} \left(f(a_{j+1}) - f(a_{j}) \right)$$
original fundamental theorem of calculus
$$= f(b) - f(a) \square$$

Maximal extension of the Fundamental Theorem of Calculus:

For $f:[a,b] \longrightarrow \mathbb{R}$, we have the equivalence:
