

## Linear Algebra - Part 2

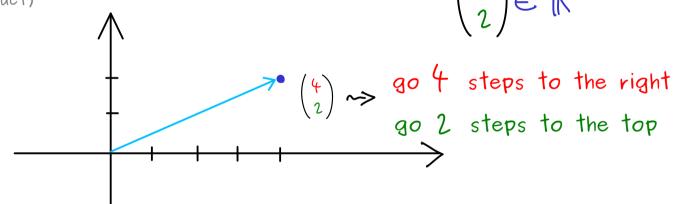

Calculation rules visualised:

Definition:

$$\mathbb{R}^{2} = \mathbb{R} \times \mathbb{R}, \text{ elements written in column form:}$$

$$(Cartesian product)$$

Scaling: 
$$\lambda \in \mathbb{R}$$
,  $V = \begin{pmatrix} V_1 \\ V_2 \end{pmatrix} \in \mathbb{R}^2$ :  $\lambda \cdot V := \begin{pmatrix} \lambda V_1 \\ \lambda V_2 \end{pmatrix}$ 

Addition: 
$$V = \begin{pmatrix} V_1 \\ V_2 \end{pmatrix}, W = \begin{pmatrix} W_1 \\ W_2 \end{pmatrix} \in \mathbb{R}^2$$
:  $V + W := \begin{pmatrix} V_1 + W_1 \\ V_2 + W_2 \end{pmatrix}$ 

$$\mathbb{R}^{l}$$
 together with the two operations  $(\cdot,+)$  is called the vector space  $\mathbb{R}^{l}$
