Manifolds - Part 5

Look at:
$$\hat{\mathcal{U}} := q[\mathbf{U}]$$
, $q: S^* \rightarrow S^*/$ canonical projection
 $\bar{q}^1[\hat{\mathcal{U}}] = \mathcal{U} \cup (-\mathcal{U}) \overset{\in}{\underset{open}{\int}} \overset{\sim}{\Rightarrow} \overset{\circ}{\mathcal{U}} \overset{\leftarrow}{\leftarrow} \overset{\circ}{\underset{open}{\int}}$
(the same for $\hat{\mathcal{V}} := q[\mathbf{V}]$)
We find: $\bar{q}^1[\hat{\mathcal{U}} \cap \overset{\circ}{\mathcal{V}}] = \bar{q}^1[\hat{\mathcal{U}}] \cap \bar{q}^1[\overset{\circ}{\mathcal{V}}] = (\mathcal{U} \cup (-\mathcal{U})) \cap (\mathcal{V} \cup -\mathcal{V}) = \overset{\circ}{\Rightarrow}$
 $\overset{1}{\Rightarrow} \overset{surjective}{\leftarrow} \overset{\circ}{\mathcal{U}} \cap \overset{\circ}{\mathcal{V}} = \overset{\circ}{\Rightarrow}$
