

By limit theorems:
$$0 = \lim_{h \to \infty} (a_h - C_n) = \lim_{h \to \infty} a_h - \lim_{h \to \infty} C_h$$

Define a subsequence $(a_{n_k})_{k \in \mathbb{N}}$ by choosing $a_{n_k} \in [C_{k_1} d_k]$
 $\Longrightarrow C_k \leq a_{n_k} \leq d_k$

sandwich theorem $\implies (a_{n_k})_{k \in \mathbb{N}} \quad \text{is convergent}$
