

Start Learning Complex Numbers - Part 3

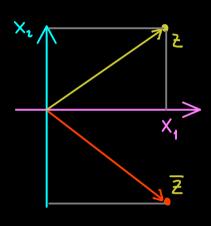

length, absolute value, modulus

$$|z| := \sqrt{\operatorname{Re}(z)^2 + \operatorname{Im}(z)^2} \in \mathbb{R}$$

Reflection: complex conjugate

$$z = x_1 + i \cdot x_1$$

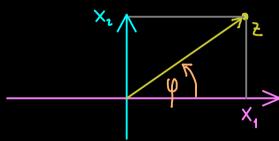

$$z = x_1 + i \cdot (-x_1) = x_1 - i \cdot x_1$$

Calculate:
$$\mathbf{Z} \cdot \mathbf{Z} = (\mathbf{x}_1 + \mathbf{i} \cdot \mathbf{x}_2) \cdot (\mathbf{x}_1 - \mathbf{i} \cdot \mathbf{x}_1)$$

$$= \mathbf{x}_1^2 + \mathbf{x}_1 \cdot (-\mathbf{i} \cdot \mathbf{x}_1) + \mathbf{i} \cdot \mathbf{x}_2 \mathbf{x}_1 - \mathbf{i}^2 \mathbf{x}_1^2$$

$$= \mathbf{x}_1^2 + \mathbf{x}_2^2 = |\mathbf{z}|^2$$

Polar coordinates:

angle: $\varphi \in [0,2\pi)$

argument of
$$\frac{X_{t}}{2}$$
 , $X_{1} > 0$, $X_{t} \geq 0$

$$\frac{\widehat{\pi}}{2}$$
 , $X_{1} = 0$, $X_{t} > 0$

$$\arctan\left(\frac{X_{t}}{X_{1}}\right) + \widehat{\pi}$$
 , $X_{1} < 0$

$$\frac{3\widehat{\pi}}{2}$$
 , $X_{1} = 0$, $X_{t} < 0$

$$\arctan\left(\frac{X_{t}}{X_{1}}\right) + 2\widehat{\pi}$$
 , $X_{1} > 0$, $X_{t} < 0$

$$z = x_1 + i \cdot x_2 = |z| \cdot (cos(\varphi) + i \cdot sin(\varphi))$$

Example:
$$2 = 3 + i \cdot 3$$
, $\overline{2} = 3 - i \cdot 3$, $2 \cdot \overline{2} = 9 + 9 = 18$

$$\Rightarrow |2| = \sqrt{18} = 3 \cdot \sqrt{2}$$
, $\varphi = \operatorname{arctan}\left(\frac{3}{3}\right) = \frac{11}{4}$

$$\Rightarrow 2 = 3 \cdot \sqrt{2} \cdot \left(\cos\left(\frac{\pi}{4}\right) + i \cdot \sin\left(\frac{\pi}{4}\right)\right) \stackrel{\text{later}}{=} 3 \cdot \sqrt{2} \cdot e^{i\frac{\pi}{4}}$$
